May 2022

Attention: Residents of Queensbury Drive area

Re: Traffic Calming 2022

Quispamsis Mayor and Council have identified Queensbury Drive as an area to continue the installation of traffic calming devices in 2022. Over the past couple years different methodology has been used to help determine their effects on pedestrians, cyclists and motorists. Residents have expressed the need for some type of system to control motorists from speeding along the corridor in two areas; Queensbury Drive North of the Lexington traffic circle and Queensbury Drive South of the traffic circle. Data does show a decrease in speeds throughout these areas when traffic calming measures are used.

During the 2022 summer season (May through October) the Town will be completing its third pilot study using Mid Block Delineators. Delineators will be placed at 10 locations (5 north and 5 south of the Lexington traffic circle). The date of installation of these devices will be the first couple weeks of May.

Residents are reminded that this area is still within the study phase and results will be used to make final decision of permanent measures. Prior to this a public consultation will be held to discuss study findings and welcome public input.

Here is an example of how the Mid Block Delineators would appear:

If you have any questions or concerns, please feel free to contact Quispamsis Engineering Department at the address below.
